Coded website.

MohCollections, Nigeria — Frontend developer

September 2022 - October 2022

Headed UI design and Ux planning, made Wireframe sketch,
Coded website.

PROJECTS

Registration DBMS — database management system

This project was built using react js and vanilla css for frontend, firebase api for backend and it was hosted with github pages. It has two interfaces.

Firstly a website that allow users to register their data and then upload it to the database.

<https://funshyaj.github.io/registration-db>

Secondly an admin software that accesses all the information of the data registered in the registration site and maps them in a table and it also has CRUD functions.

<https://funshyaj.github.io/registration-db-admin>

Budget app — Budget calculator web app

Built a budget app that calculates your budget in seconds and helps you make better decisions for analysis

More features to be added soon

- Share button
- Pdf print
- Local storage
- Chrome install to local device

<https://funshyaj.github.io/budget-app>
